

# Residual waste

## Sorting guidelines

In the bin for mixed waste goes all non-recyclable waste, dirty materials or waste composed of different materials. Íslenka gámafélagið collects mixed waste from customers in the capital area and from the south and transports it to Europe, where it is burned in high-tech incinerators and the energy is used for electricity production and home heating. From other areas, it is dumped at the nearest landfill.

Paper towels
